

## THE NEED OF VIRUS RESEARCH IS BIGGER NOW THAN EVER:

- Increased risk of pandemics in today's society (traveling, globalization, climate change and reduced biodiversity).
- Insufficient knowledge about viruses and virus-caused diseases/pandemics in society in general – despite important learnings from the pandemic.
- Not enough protection against the next virus-caused pandemics or diseases – the pandemic is a proof that society need to prepare more.

## HELP US PROTECT SOCIETY AGAINST VIRUS CAUSED DISEASES

BUT WE NEED RESOURCES AND SUPPORT, OR THE FUND MIGHT NOT EXIST IN A YEAR

### THINGS WE HAVE DONE SO FAR, SINCE 2021:

- Awarded grants to virus researchers.
- Established a "Society Advisory Board" with representatives from society – to gather important learnings for the future
- Held campaigns to raise money for virus research – with focus on post covid, virus caused diseases affecting children etc.
- Launched 3 reports with insights for the future – with a good spread
- Kept up the discussion with stakeholders and media about the importance of virus research to solve future challenges
- Spread important virus knowledge to increase the general understanding – with initiative such as Viruskollen.se
